

# Query HIE Process – Automated Daily Query with Manual Retrieve during Patient Visit

<---- Automated daily query by the EHR system to search for available data and documents for patients scheduled to visit. This results in a list of what is available but does not yet retrieve this information -----> <---- Review, selection, retrieval, and reconciliation of available patient data and documents by clinical staff during patient visit (but switch to manual query and retrieve process if patient did not yet consent to queries) ----->
